

Aura AI

Rank-ready content operations on **autopilot**

A commissioned SEO content platform for the client – research, drafting, quality scoring, brand voice, and campaign visuals inside one authenticated workspace.

AI role: integrated into Writer, Chat, and Images (optional GPT-4o / DALL·E or Pollinations) to draft, research, and generate visuals; workflows + SEO scoring automate the path from brief to publish-ready asset.

01 · MAIN MOTIVE

Give content operations a single system of record

Motive: compress research, drafting, scoring, and asset organization into one product surface so SEO teams ship consistently — with quality controls intact.

MISSION

Operationalize SEO content

Every input becomes a usable asset — draft, research answer, voice profile, or visual.

INTENT

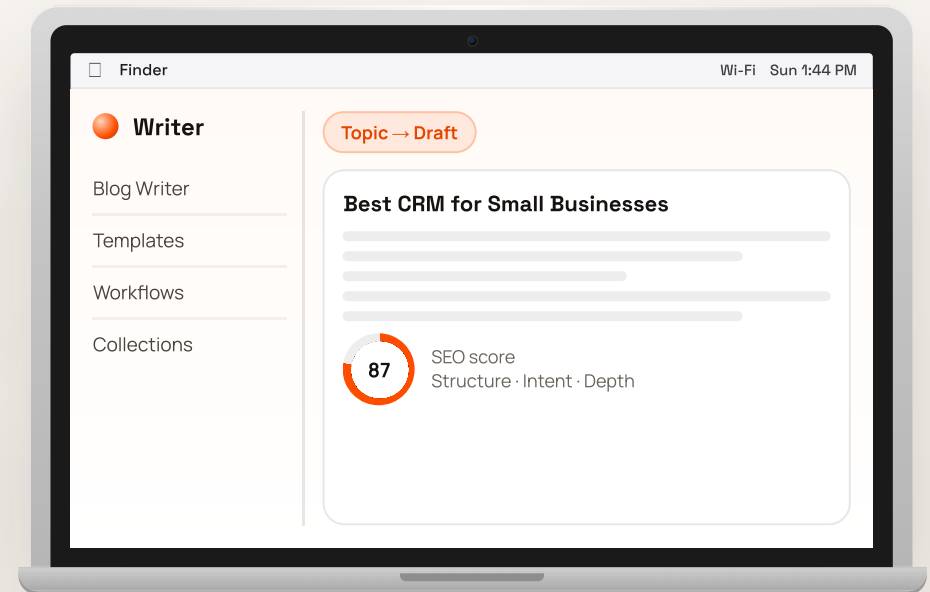

Replace tool sprawl

One coherent platform instead of docs + chat tabs + image apps + spreadsheets.

NORTH STAR

Faster cycle, higher confidence

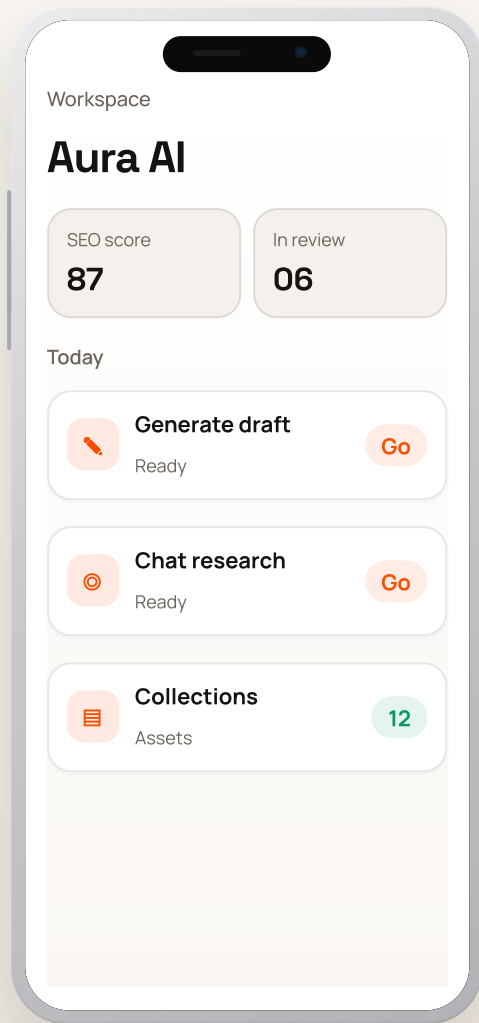

Shorter path from brief to publish-ready draft with reusable collections.

Aura AI

SEO CONTENT PLATFORM

02 · WHY BUILT

Market friction versus product response

FRICION

Fragmented stack

- Briefs live in docs
- Research in chat tabs
- Assets scattered

RESPONSE

Unified workspace

- Auth-gated product
- Shared collections
- Score before publish

03 · BUSINESS VALUE

Commercial outcomes the product is built to protect

RETENTION

Workspace memory

Collections and brand voice pull teams back into the same system of record.

THROUGHPUT

Shorter cycle time

Brief → draft → score → assets without tool-switching tax.

QUALITY

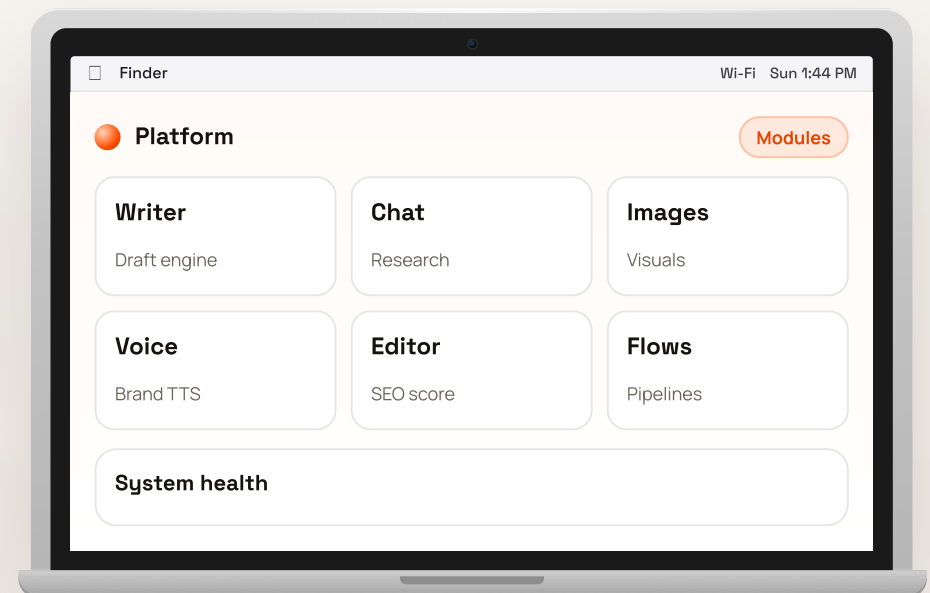

Publish confidence

SEO heuristics and voice checks reduce rewrite loops.

SCALE

Repeatable pipelines

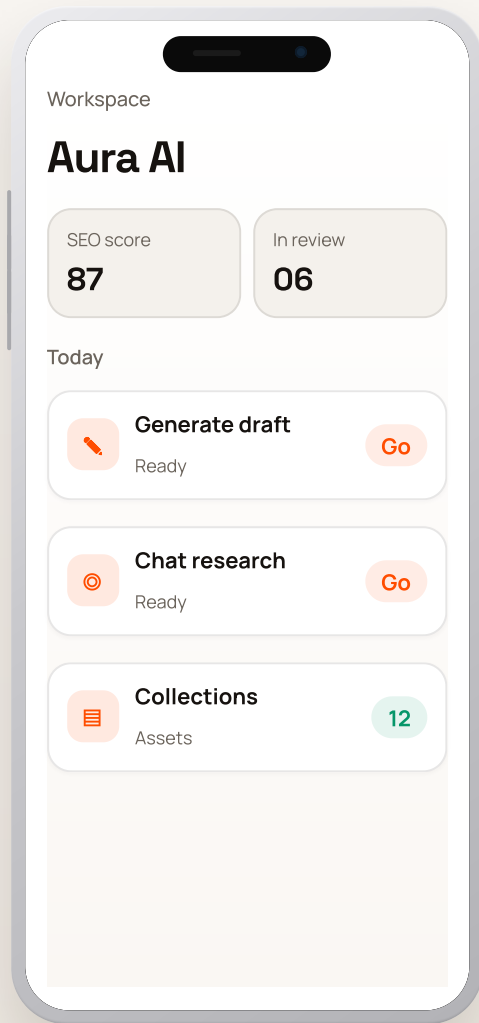

Templates and workflows encode how the team ships.

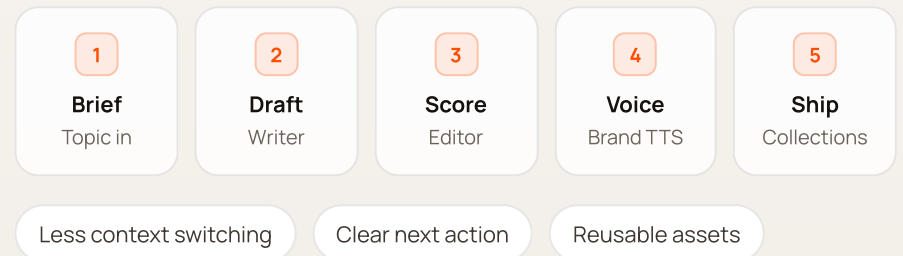

Aura AI

SEO CONTENT PLATFORM

04 · USER BENEFITS

What operators feel day to day

05 · CORE INTELLIGENCE

What AI does — and how it runs

AI is the production layer inside the workspace — it drafts copy, answers research prompts, and creates campaign images on demand. Automation comes from templates, workflows, and SEO scoring that move a brief toward a publish-ready asset without hopping between tools.

WRITE

Draft generation

Topic + template → draft via GPT-4o when keyed; local engine keeps Writer usable without a key.

CHAT

Research assistant

Intent maps, angles, and outlines through the chat API — same workspace, same session.

IMAGES

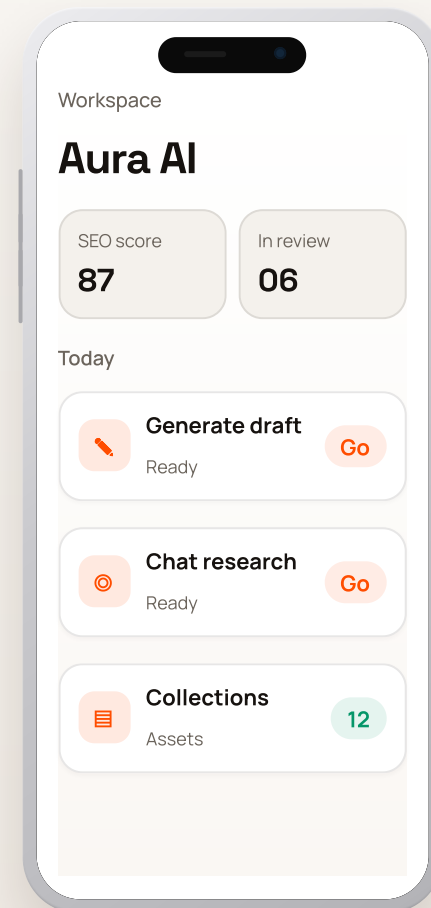

Visual generation

Prompt → DALL-E 3 or Pollinations; offline path stays prompt-aware so screens never go blank.

AUTOMATE

Score + workflows

SEO heuristics score structure/intent/depth; templates and workflows repeat the pipeline.

06 · FULL PICTURE

Product surface at a glance

WHAT

Aura AI workspace

Marketing, auth, Writer, Templates, Editor, Chat, Brand Voice, Images, Workflows, Collections.

STACK

Next.js · TypeScript

App Router, optional Supabase Auth, OpenAI / Pollinations image path.

WHO

SEO & content teams

Operators who need throughput without sacrificing review discipline.

OUTCOME

Client deliverable

Commissioned commercial product built for the client — AI integrated, workflows automated, not a disconnected demo.
